MAILMASTER 565 HS

Fast Sheet Feeder with integral sheet accumulator and folding. Optical Mark Reading, OCR, Barcode and 2-D reading can be added. Jobs can be stored to simplify changeover.

Touch screen control of machine operation with a choice of three levels of screen. The simplest level gives station selection, speed control, re-settable counter, help pages, output speed and error location display. A larger screen is available which provides further on screen run information. A third choice is a PC screen which also provides management information and print-out facility.

The Mailmaster **565 HS**, in common with all KAS Inserters, combines a unique design with proven technology, backed by over forty years experience in mailing. It handles utility style up to 6 1/2" x 9 1/2" envelopes, inserting at speeds of over 7,000 completed envelopes per hour. This equipment is available in a number of configurations with a host of features.

The equipment's durable build quality means that it can handle long runs whilst its ease of set-up and quick changeover between jobs makes it equally viable for short runs.

Insert stations can handle a wide variety of materials including single sheets, card, reply envelopes, pre-folded items and booklets. Each system has one bookfeeder as standard, capable of handling books up to 5mm thick. Each insert station has miss, double and jam detectors.

There are further sensors throughout the machine to check the path of the documents through the system. Any error automatically stops the machine and the location is displayed on the screen.

A number of end feeders can be added to feed and fold cut sheet or continuous forms, with or without reading facility, and giving the choice of folding separately or nest folding.

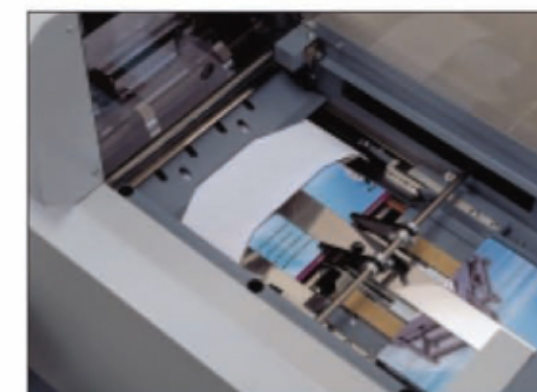

Optical Mark reading, Barcode scanning or OCR are all available to facilitate batching of the prime document, selection of inserts, matching with insert stations, out-sort of filled envelopes before sealing, envelope marking and mail sorting.

Standard Features:

- Inserts into utility style up to 6 1/2" to 9 1/2"
- Quick job changeover
- Durable construction
- Variable speed
- Up to 7200 envelopes per hour output
- Touch screen control
- Sequential start up/clear down
- Simple top load, bottom feed
- Envelope low sensor
- Miss, double, jam detectors
- Bookfeeder as standard
- In-line folding
- On-screen run information
- Hand feed position

Options:

- Document accumulation and nest folding
- In-line corner stapling
- OMR, OCR, 2D and Barcode reading
- Management information
- Report print facility
- Multiple feeding from insert stations
- Automatic station switching
- Filled envelope divert
- Envelope marking
- Output conveyor stacker
- Mail sorting
- Output integrity control
- In-line metering

The unique KAS pocket type insertion system positively guides the material into the envelope and provides greater protection for personalized documentation.
